Resilience has become a key concept across science, politics, and society, whose growing conceptual diversity calls for interdisciplinary and transdisciplinary approaches. The summer school hosted by the Leibniz ScienceCampus "Resiliencies: Comparing and Integrating Methodologies, Methods, Narratives, and Theories - Mainz/Trier" (RECOMENT) addresses this challenge by exploring resilient humanscapes, focusing on how resiliencies emerge and are negotiated within the entanglements of human societies and their cultural, environmental, and historical contexts.

Designed for postgraduate students, doctoral candidates, and postdoctoral researchers, it combines thematic clusters with interdisciplinary exchange and practical training in methods such as Deep Mapping to provide both conceptual insights and analytical tools. Lectures, workshops, excursions, and collaborative sessions foster engagement with current debates and support participants in contributing to ongoing research in resilience studies.
